HDF, HPL and 4 layers of veneer

Type 60 (6 x 0,5 mm)
Aluminium

Type 70 (6 x 1,5 mm)
HDF and HPL

When O.H. Industri makes groove-patterns in Oak and Mahogany veneer, only front veneer and the third layer is Oak and Mahogany which means that there will be a visible lighter line in the second layer. Note that the same type of veneer in all three layers is an option but only on special request and at additional cost.

Please note that the drawing show the different types of grooves only - the construction of the boards may differ.
